What's New

2025-01-21 - Lin Kelly - [Announcements](#)

The Auto Change Member Type by Age was created for organizations/clubs that want their users' Member type to automatically update to a different member type when they reach a certain age. For example: if an organization wants all "Active-35" member type users to automatically switch to "Active Member" member type when they reach 36 years old.

Account users can set this up by going to the Admin tab, then Member Type.

Click on the Edit on the top right of the screen.

Enter the Age (36) in the "Age Change" column. Then select the member type it needs to be changed to under Age Member Type Column. In this case "Active".

A scheduled task is run every night, so in this District (our test district 9969) all members in the system who are set to Active-35 and turn 36, will automatically be changed to "Active".

The user must have a complete birth date listed in their profile in order for them to be changed.
